RAND CODEBOOK Reminders

The RAND Clinical Registry Codebook is the only clinical (i.e., service use) data you are required to submit for the grant.

In the Summer/Fall a “draft” registry was sent out for review. This is not the same as the codebook. Pls. make sure you're collecting and submitting the data in the codebook (original e-mail 12/22/10)

RAND CODEBOOK Reminders Continued

The Clinical Codebook data needs to be collected on all services provided, as defined in the codebook, to PBHCI participants/consumers.

We realize collecting data from providers that are serving PBHCI participants outside of the PBHCI program can be hard to obtain. Per your contract with SAMHSA, you are **REQUIRED** to collect BP, BMI, etc. quarterly and blood work annually. You must have these data to enter into TRAC.

TRAC Data Collection Reminders

Enter TRAC NOMS/PH Indicator data back to Feb 1st, 2011.

If you have lab values that precede the Feb 1st, 2011 you may enter them into TRAC if you do not have more current lab data to enter.

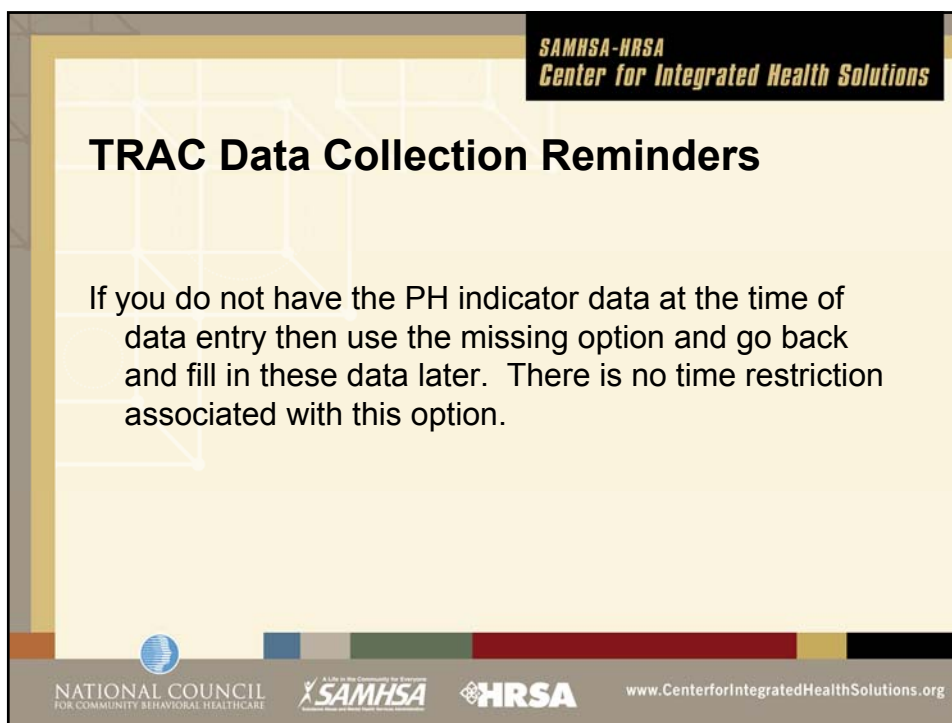

The mechanical PH indicators (i.e. BMI, BP) need to be captured in your clinical documentation but only entered into TRAC during the baseline and ongoing reassessment dates. Enter the most recent data you have into TRAC.

TRAC Data Collection Reminders

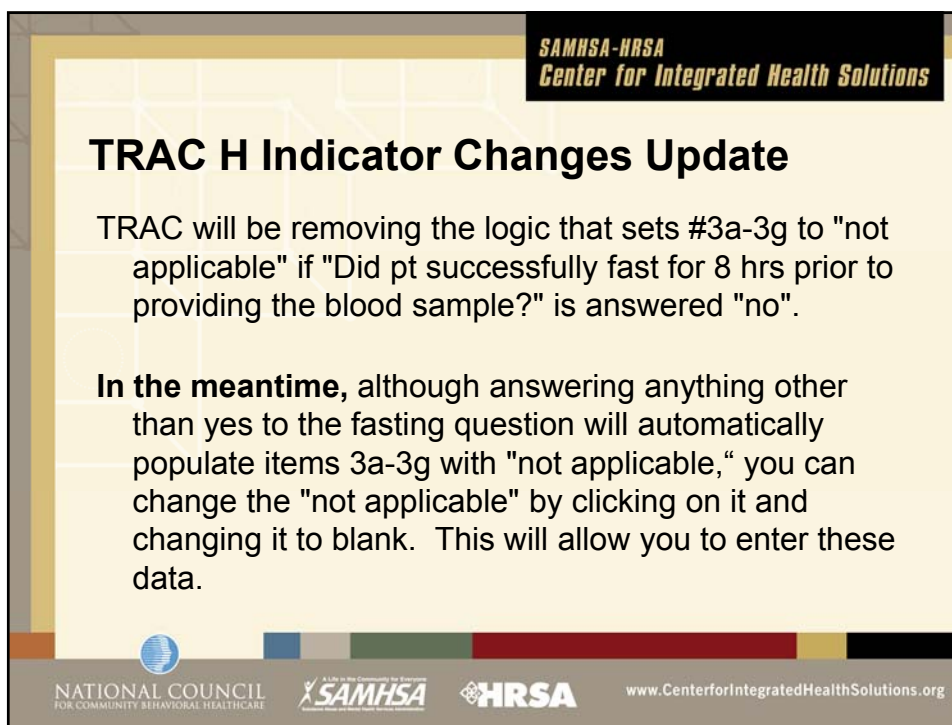

If you do not have the PH indicator data at the time of data entry then use the missing option and go back and fill in these data later. There is no time restriction associated with this option.

TRAC H Indicator Changes Update

TRAC will be removing the logic that sets #3a-3g to "not applicable" if "Did pt successfully fast for 8 hrs prior to providing the blood sample?" is answered "no".

In the meantime, although answering anything other than yes to the fasting question will automatically populate items 3a-3g with "not applicable," you can change the "not applicable" by clicking on it and changing it to blank. This will allow you to enter these data.

SAMHSA-HRSA
Center for Integrated Health Solutions

TRAC H Indicator Changes Update

Expanded ranges for lab values to include decimal values for the HgBA1c only.

In the meantime, if a value is outside of the range or has decimal, leave the variable blank until the full range becomes available.

TRAC H Indicator Changes Update

The TRAC system will allow the grantees to enter both fasting plasma glucose and HgBA1c - fields will not grey out.

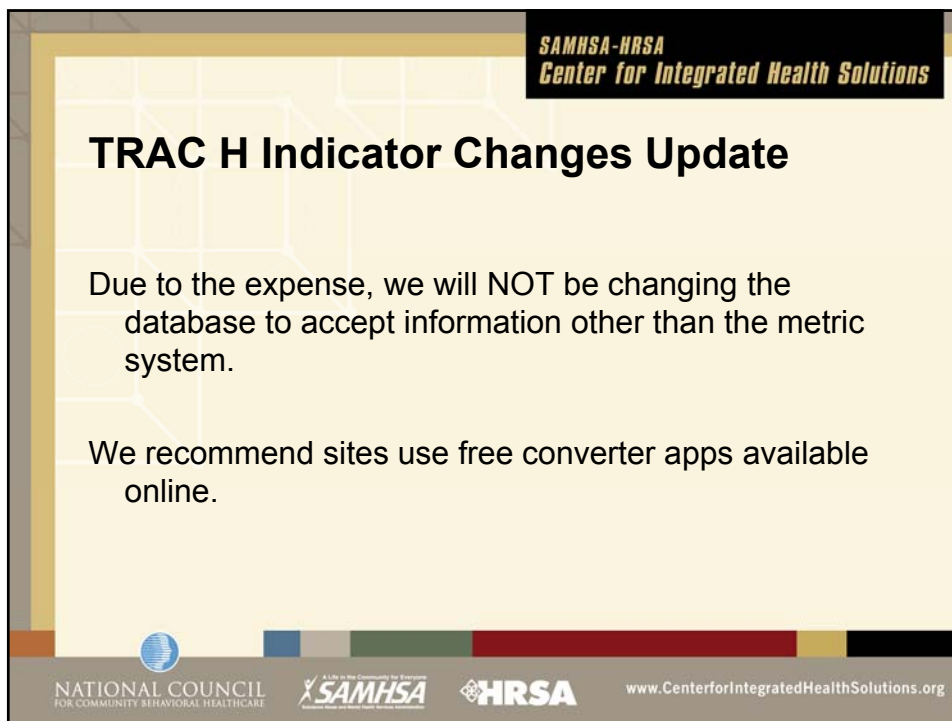

In the meantime, Pls enter HgBA1c if both fasting glucose and HgBA1c values are available.

TRAC H Indicator Changes Update

Due to the expense, we will NOT be changing the database to accept information other than the metric system.

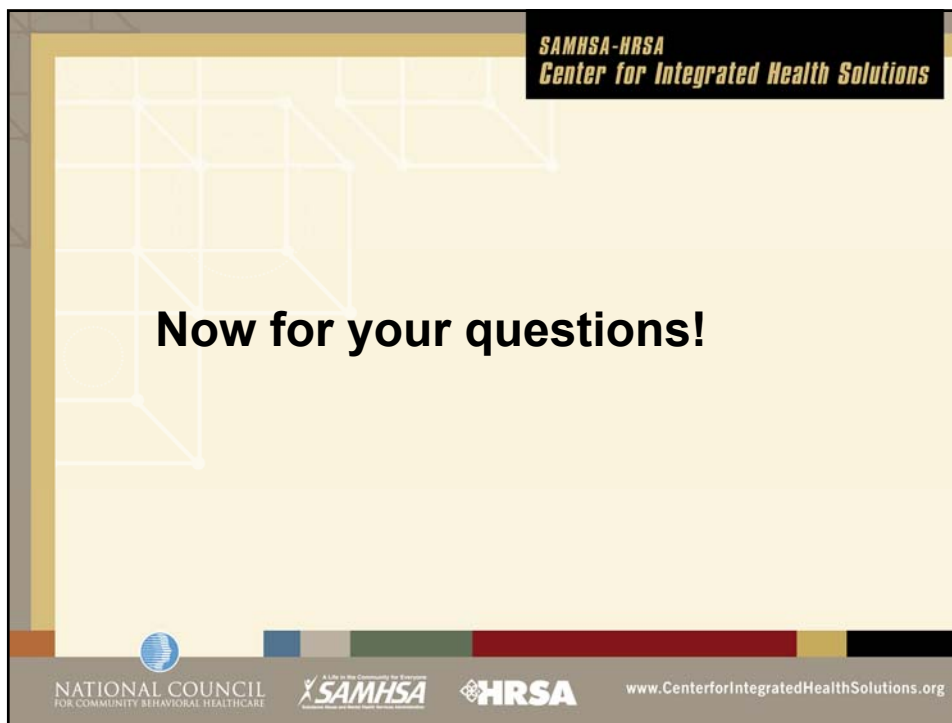

We recommend sites use free converter apps available online.
